Intermec Technologies is a division of Intermec, Inc. (NYSE: IN (until January 1st, 2006 a UNOVA Inc. group company - NYSE: UNA), an industrial technologies company. We market a complete line of data collection hardware, network devices, mobile computers, bar code printers, and label supplies in 70 countries, and support our offering with a worldwide sales and service network.

Our products help enterprises keep track of vital information as supplies and resources move throughout business processes, such as asset tracking, shipping and receiving, inventory control, retail store optimization, work in process, time & attendance, transportation, route distribution, field service and sales automation.

Intermec is a strong combination of three industry leaders: Intermec, Norand Corp. and United Barcode Industries. Today known as Intermec Technologies Corporation, Intermec is a company dedicated to helping companies use supply chain information systems to improve efficiency and profitability. The headquarters is located in Everett, Washington State, USA.

In order to provide superior service and support in every country, Intermec has implemented the Global Partner Program. It defines the "Intermec way" of sales, service and support standards, it trains and measures the partners' performance to the standards, and treats the partner as if they were us, i.e. gives the partner access to technical documentation and continuous training and support.

According to that policy we appointed **IST Mobile Printing s.c. as the Accredited Partner**, which require that they had to accomplish series of sales and technical trainings to be certified.

Certification and our positive experiences in cooperation is strong recommendation to trust their competences and level of support. And is also good recommendation for the future contracts.

Best Regards

Krzysztof Strąk
Vertical Manager

A handwritten signature in blue ink, appearing to read 'Krzysztof Strąk', is written over the printed name. Below the signature, the text 'Intermec Poland' is printed.
